### THE TOWER OF POWER

The “Tower of Power” features the latest collaborative technology creating a flexible and friendly workspace for the QLD Government and their staff.

Partnering with Dimension Data Australia, Pro AV Solutions presented nine integrated meeting room types incorporating collaboration and VC capabilities for the initial +350 meeting spaces with more to follow.

The aim of the client was to foster a change of culture for government departments and its workforce to attract new talent and reach new levels of innovation.

Focusing on this end goal, the project revolved around the user experience and the role technology would play in this new work environment.

A full-height atrium in the Tower enables a non-hierarchical, inclusive work space. Connectivity on and between floors was a key driver, with a variety of workspaces delivering a mix of

**The technology complements the 1WS modern workspace to support and improve information sharing, stakeholder engagement, collaboration and productivity.**

of individual and team-based activities. A set standardisation was applied to many the spaces to maximise efficiency and support. With wireless collaboration in all spaces, the Tower is BYOD enabled giving the staff complete flexibility.

## THE TOWER OF POWER

The technologies implemented are scalable and support 'anywhere, anytime, any device network connectivity' to help staff collaborate and be more productive.

With wireless presentation and collaboration solutions, the client can view, edit and comment on documents in real time, share files and chat with individuals or groups via any device. This technology enables a face-to-face experience for meetings which facilitates staff and guests' real-time information sharing and collaborative working..

As the first deployment in Australia, the AMX Resource Management Suit (RMS) implementation has intelligent code forwarding for replaced hardware without human intervention. This includes the monitoring of site wide automatic/scheduled firmware updates, power consumption, energy utilisation, asset registering & tagging.

This innovative and agile workspace is ideal for the collaborative and connective environment the Queensland Government are striving for.
