

ADELAIDE CONVENTION CENTRE

ONE OF THE TOP CONVENTION CENTRES AROUND THE WORLD.

The ACC required a complete digital update of seven of their Premier function spaces due to the challenges they were facing with an outdated system.

With many pre-booked functions at the venue, the client's requirements were for a high-quality, full functioning and operational system delivered by a firm deadline. This project was successfully delivered within twelve weeks from start to finish.

The client needed to see a high level of planning, consultation, project management in order to meet the challenging time frame. The new technology solution delivered has greatly improved the audio visual capabilities and routing flexibility within all seven spaces.

Simplified and user-friendly Touch-Panel controls were integrated into all spaces improving the overall user experience. We also assisted with the revision of the

setup/packdown processes for their in-house technicians, making this a much more straightforward process as well as re-organising the AV rack patching.

The system also contains a robust (90Minute) UPS backup for key spaces and ample bandwidth and future capacity with significant fibre infrastructure installed for future use.
