

COMMONWEALTH BANK OF AUSTRALIA

DARLING SQUARE, SYDNEY

CommonwealthBank

Pro AV Solutions were successful in their bid to provide audio visual services and business technologies to Commonwealth Bank of Australia for their new building in Darling Square, Sydney.

The technology systems deployed into the building were designed by InnovaTech, with Matthew Loupis being the lead consultant representative.

Pro AV deployed over 200 spaces with many forgoing complex control systems in lieu of a simpler, more user friendly, plug and play experience. The project also had some specialised areas, including Australia's very first OLED video wall, a dedicated open area atrium running high end Martin Audio Arrays producing crystal clear audio for large gatherings. One of the most spectacular features of the building is the unique projector mapping of a central column that connects floors which provides stunning visuals for the entire building on the circular column.

Pro AV deployed over 200 spaces with many forgoing complex control systems in lieu of a simpler, more user friendly, plug and play experience.

Pro AV were also commissioned to integrate the entire MATV system, from satellite dish to device via a sophisticated RF modulation system. This system was used to provide Commonwealth Bank their own Satellite TV broadcast, as well as pay TV and Free to air. An employee gym, waiter call system, security room and room booking panels for every meeting room rounded out the AV.
