

GOODMAN GLOBAL PROPERTY GROUP

Goodman

Based on successful projects in Sydney and other locations, we were invited to design and deploy a suite of AV systems for their new Melbourne headquarters.

With the client facing a rapid construction, the key challenge for our team was to accomplish the Audiovisual Technology for the facility in less than six weeks.

By leveraging the new Crestron NVX systems, Pro AV Solutions successfully found substantial efficiencies in both price and time, by coordinating with the data and electrical teams to provide the structured cabling.

The Crestron NVX solution also allowed for a simpler design in joinable meeting areas, offering a more robust and flexible deployment. Crestron control automates both the AV systems and simplifies control of the Levittown BMS for easy access to lighting, blinds, HVAC and security.

“We are impressed with the way Pro AV Solutions dealt with moments of adversity, never losing their friendly and professional demeanour and doing whatever it took to achieve an outstanding result”.

Presentation displays include both Epson laser projection and 4K Sony commercial LED. The reception area is also home to a stunning 98 inch NEC 4k LED display, powered by BrightSign media player for dynamic visual communications.
