

INTERACTIVE PTY LTD

PORT MELBOURNE DATA AND OPERATIONS FACILITY

Our client is locally owned, forward thinking & innovative. Their mission is to unlock the power of IT, making their clients' businesses ever more competitive.

The business needed to leverage each system to enhance daily operations, and technology needed to be integrated both in terms of structure and workflows.

Presentation and collaboration solutions had to be impressive, reliable and intuitive enough for all staff and clients to use and of course, had to meet a budget.

The scale and nature of the project presented a complex set of challenges. Our role was to interpret the client's requirements, meet the architectural objectives, and provide a level of technology that would align with progression over an extended period of time. This meant pushing the boundaries of what was available, delicate negotiation with architects and builders, and leveraging

“Their extensive knowledge of cutting edge and pipeline systems coming onto the marketplace, appropriate end-point display solutions and the back-end IT requirements to integrate it all, engendered such a high degree of confidence and trust, that we invited Pro AV Solutions to tender for the AV construction contract.”

technology that was 'just around the corner' during the design phase and then implementation of robust systems that are inherently simple & intuitive to use.

INTERACTIVE PTY LTD

PORT MELBOURNE DATA AND OPERATIONS FACILITY

Our team designed & deployed a comprehensive suite of audio visual, unified communications and collaboration solutions across the entire facility.

By taking a holistic view of the client's objectives and culture, solutions were designed to integrate with workflows and enhance user experience at every level.

Spaces across the entire facility are integrated and automated with Crestron infrastructure and management solutions, ensuring availability and simplified operation of all systems.

The AV systems deployed to each space.

range from simple digital displays to fully bespoke interactive touch surfaces with visual communications software platforms.

Since the client took possession of the building, Pro AV have worked tirelessly to provide phenomenal post-build support to staff, particularly around system training. As a result, the organisation has enjoyed a very smooth transition to a significantly more technologically advanced workspace, and clients/visitors are also profoundly impressed with the facility.
