

ORIGIN ENERGY

ONE OF AUSTRALIA'S LARGEST ENERGY SUPPLIERS

Pro AV Solutions was commissioned to introduce new age workspace technologies that allowed for simplistic operation resulting in an exceptional user experience.

The aim of the client was to create an intuitive and pleasant user experience, while reaching new levels of innovation. Focusing on this end goal, the project revolved around the user experience and the role technology would play in this new work environment.

Pro AV Solutions and Creston teams worked in unison to develop various designs specific to each space for the both sites. The spaces ranged from small collaborative, video conferencing and huddle spaces, through to large meeting and conferencing rooms.

With wireless presentation and collaboration solutions, the client can view, edit and comment on documents in real time, share files and chat with individuals or groups via

Pro AV Solutions delivered a best-in-class National project that was standardised across two sites and simple for the end user.

any device. This technology enables a face-to-face experience for meetings which facilitates staff and guests' real-time information sharing and collaborative working. Video conferencing is a major part of Origin's technological road-map, which gives personnel the opportunity to communicate

communicate effectively between regional and metropolitan sites.

Additionally, the collaborative technology integrated into the range of spaces allows viewing, annotating and editing of presented content, in real time.

A significant improvement to the user experience was the introduction of wireless connectivity which enables very simple "connect and display" functionality. Digital signage upgrades have allowed Origin to consistently promote their marketing material within both premises, as well as

health and well-being material for their staff. A system induction and training day for the Origin staff following the completion of the projects ensured that their users felt comfortable with the new technology introduced in the workplace.

With the Sydney fit out taking place following the completion of the Brisbane project, uniformity between the sites was crucial. Having the same touch and feel in every space was critical to the user interface design as it would heavily impact the user experience in each space.
