

## NORMAN WATERHOUSE LAWYERS

ADELAIDE

Norman Waterhouse is a premier multi-service commercial law firm, providing legal services to a large number of entities throughout Australia.

The priority and key to this project was the integration of these AV technologies with existing office workflows, as well as the workplace efficiencies and quality of daily operations within their interstate communications.

The project scope provided to Pro AV Solutions highlighted the importance of the AV system's quality, ease-of-use and consistency across all of the new workspaces. As the spaces were expected to be used by both internal and external participants, the systems had to be impressive in their quality, as well as intuitive in their operation to ensure minimal training and ongoing technical support.

**The team at Norman Waterhouse required a full design and construction of Audio Visual technologies within their office location in Adelaide CBD, which spans multiple floors.**

The client required a number of meeting rooms, huddle spaces, open-plan presentation spaces and two joinable boardroom/training rooms. Each boardroom boasts its own 4K LCD large display with the ability to combine for larger presentations via joint usage of a recessed motorised projector and projector screen with discreet in-ceiling speakers.

ADELAIDE

The technologies integrated into the new joinable Boardrooms allow presentations and conferences to be recorded for upload or can be livestreamed to those unable to attend.

To facilitate the client's ethos on workplace collaboration, interactive LCDs were deployed within several of the spaces, including portable solutions allowing for usage throughout their offices.

With the UI interface for each room designed for optimal user experience, interaction with

each system's control device for staff and guests is intuitive and simple to understand.

Pro AV Solutions leveraged custom-touch screen devices in majority of spaces where multiple devices were in operation. Each controller's interface were designed by our dedicated, in-house Programmers in collaboration with Norman Waterhouse Lawyers, ensuring not only the key system commands were integrated, but also that they were presented in an intuitive design and with the company's corporate branding presented throughout.
