ST RITA'S COLLEGE – TRINITY CENTRE

BRISBANE, QLD

St Rita's College in Brisbane is one of the leading secondary schools in Brisbane, encompassing first-class academic and vocational pathways to tertiary study and/or employment for its students.

St Rita's goal was to open a new innovative learning precinct, the Trinity Centre, to resource the learning, performance, examinations, speaker programs, student social interaction, and College-wide functions and events. Pro AV Solutions were selected to provide a design & construct value-engineered approach to enhance the AV packages selected for the building and assist the college in adopting a new software-defined control approach which would extend itself to existing room upgrades and new works where required without additional hardware costs.

The project was a very bespoke building design and revolved around teaching the arts, so not only needed to be innovative but agile and reliable.

Our overall aim was to provide a new platform of audiovisual solutions that were well supported, utilised structured networks for content delivery and featured smarter software-defined control to allow more building control elements made available to user controls.

ST RITA'S COLLEGE – TRINITY CENTRE

BRISBANE, QLD

The Trinity Centre provides exceptional learning spaces for a range of vocational subjects and is home to the performing arts and film, television, and new media programs. The 400-seat auditorium, equipped with the latest in audio-visual technology, offers our students a state-of-the-art venue for drama, musical theatre, ensemble, band, and solo performance, as well as guest speakers and lectures, staff and student meetings. The large and small musical instruction rooms are welcomed by our music individual teaching and ensemble staff.

Working closely with the customer Pro AV brought in a production lighting specialist and provided modelling to give everyone confidence the additions would solve the lighting deficiencies. User training on the lighting system was also provided once all upgrades were complete.
